

FARONICS DEPLOY

Lightning fast deployment for Applications, Windows Updates and Operating Systems

■ Application Management

Automated updates for Windows and Mac
Manage any Application including MS Office or Adobe Suite instantly
Works without user intervention
Cache server to optimize bandwidth

■ Windows Updates

Up-to-date patches with on-demand patch scanning
Granular policies with selective updates
Test before deploy with approval process
Pull updates from cache or WSUS infrastructure

■ OS Deployment

Modular File based OS deployment
Capture, deploy one golden image on varied hardware
Install Settings including disk partitions, express OOBE
Supports cloud based management of WDS setups

■ Remote Control

Remote-in over the web via RDP or VNC
Wake-up, shutdown all computers in one click
Remote PowerShell execution capabilities

Faronics Deploy allows you to manage computers and devices on your network from a browser. Since Faronics Deploy is a cloud-based solution, there is no installation required.

With cutting edge software management technology and an intuitive industry leading UI, Faronics Deploy, is here to change the game.

Did You Know?

70% of businesses are either using or investigating cloud computing solutions.

The screenshot displays the Faronics Deploy web interface. At the top, there are tabs for Applications, Windows Updates, OS Deployment, Inventory, and Policies. Below the tabs, there are buttons for INSTALL, UNINSTALL, UPDATE, CUSTOM APP, and CUSTOM SCRIPT. The main section shows a table of computers with columns for Computer, Office 365, Google Chrome, Fusion 360, Acrobat Reader, VLC, and Java. The table lists several computers and their associated application versions. Below the main table, there is a section for Pending Updates, showing a table with columns for Name, Release Date, Version, Installed, and Outdated.

Computer	Office 365	Google Chrome	Fusion 360	Acrobat Reader	VLC	Java
Steve's Laptop	1912	79.0.0.0000.0000	9.0.0.0.00	12.00.0.0	32.0.0.0000	8.0
Adam's Laptop	1912	79.0.0.0000.0000	9.0.0.0.00	12.00.0.0	32.0.0.0000	8.0
Richard's Desktop		79.0.0.0000.0000	9.0.0.0.00	12.00.0.0	32.0.0.0000	8.0
Roy's Desktop		79.0.0.0000.0000		12.00.0.0	32.0.0.0000	8.0
Catherine's Laptop	1912	79.0.0.0000.0000		12.00.0.0	32.0.0.0000	8.0
Sophia's Laptop			9.0.0.0.00	12.00.0.0	32.0.0.0000	8.0
Anna's Desktop			9.0.0.0.00	12.00.0.0		8.0

Name	Release Date	Version	Installed	Outdated
Adobe CC	10/12/2019	13.0.0	21	7
Mozilla Firefox	18/12/2019	71.0.0	90	5

Faronics Deploy.

Key Features

Reliable

Always-connected, no local server required - each workstation connects to the Deploy Server individually, eliminating risk of single-point failure. Failed updates are detected instantly and populated in a dedicated grid on the dashboard.

Complimenting Existing Systems

Policies that let you set the behaviour for every app for full control of update behaviour including disabling self-updates for applications and desktop shortcuts. Version freeze disables application updates from being pushed out completely.

Granular Control

Policies that let you set the behaviour for every app for full control of update behaviour including disabling self-updates for applications and desktop shortcuts. Version freeze disables application updates from being pushed out completely.

Scalable

Deploy's decentralized cloud-based architecture ensures Faronics Deploy can be used to manage any number of computers independently without choking local resources or bandwidth.

Modular

Deploy separates the OS, driver groups, install settings and application layers enabling mix and match of a Golden OS Image with driver groups for different hardware types

Flexible

Deploy provides application level control for automating or freezing updates. Once pushed, updates happen instantly, in the background, without user intervention, ensuring that your environment is always up to date.

Easy to Use

Intuitive real-time, modern descriptive UI with grid based point and shoot install, update and uninstall actions. No training required.

Resource Friendly

Deploy can pull updates from the Deploy cache server or from an existing cache to reduce bandwidth load on your network.
